

Inline Sliding Door

Description

The Inline Sliding Door system allows you to create 2, 3 and 4 panel combinations of both fixed lights and sliding doors. The system is available for both timber fix and direct fix applications. The system incorporates a full range of hardware including built-in night ventilation, multi-point locks, anti-slam and anti-lift devices and heavy duty, stainless steel tandem rollers ensure easy and smooth operation.

Applications

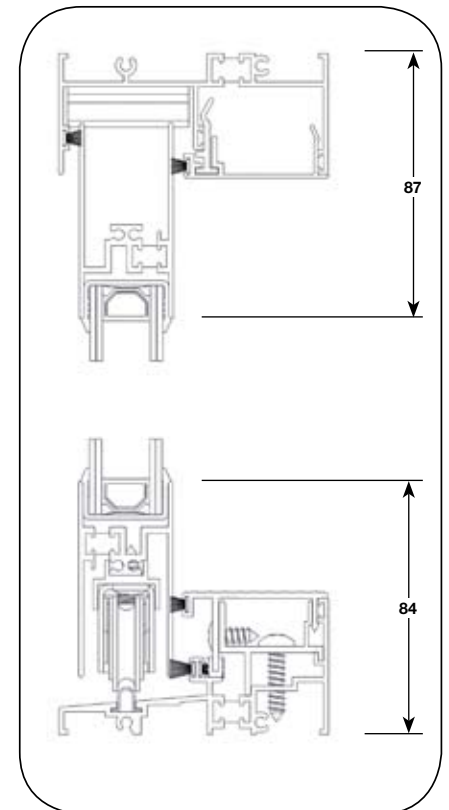

The Inline Sliding Door range is flexible and versatile and can be specified for a range of applications including:

- New build or refurbishment projects
- Domestic and light commercial
- Residential and social housing
- Low, medium and high rise
- Juliet balconies, conservatories and internal room dividing

- Complies to Part L of the Building Regulations
- Can accommodate 2-pane, 3-pane and 4-pane configurations
- Fully compatible with the entire Beaufort Product Range

Design Features

- The wrap-around glazing accommodates 24mm double glazed units
- Design allows for standard high security adjustable locking systems to be installed
- Thermally broken for improved thermal performance
